

Phishing and Security Awareness Training

Why Do You Need Phishing and Security Awareness Training?

In an ever-evolving world of cybersecurity threats, your users are your biggest vulnerability. Most employees are unaware of these risks and how to recognize them. Educating, Training, and Testing your employees are the best ways to prevent this. That's where Phin steps in to fill this gap. We provide fun and engaging content that keeps your employees at the top of their cyber security game.

Ease of Use

Automatic Reporting

Reports go out to your key stakeholders automatically to make it easy to understand your results and "Users to Watch."

Quick Training Content

Training is delivered in various forms, which keeps your employee's engaged. They're done in 5 minutes or less!

No Account Needed

No need to remember another password, training is delivered directly to your inbox!

Key Features

Continuous Phishing and Training

At Phin, we've created a continuous training model based on your requested frequency. Employees will receive training & simulated phishing on an ongoing basis to keep their cyber threat skills up to par, be aware of new threats, and be vigilant on what to look out for throughout the year.

User Experience

We've made sure that the user experience is one that keeps users engaged. Our training content is quick, effective, and fresh! We train on various topics and always with new content. For Phishing, we've designed a system called, *Learning Moments*, that makes learning easy and personalized for the employee. With Phin, your team will be trained so that they feel confident while spending time online.

Phishing and Security Awareness Training

Why Do You Need Phin?

Should I click on this email? It's a question you ask yourself multiple times during the day. Phin helps raise your SAT intelligence by showing you what you need to know and do to stay on top of your cyber security game!

Phishing

Our training is delivered fresh and consistently in order to increase understanding of what to be on the lookout for. Phishing is delivered randomly over a 72-hour period. No employee receives it at the same time or the same phish. After getting phished, we provide *Learning Moments* that train the employee to avoid these mistakes in the future. We focus on encouraging learning and growth in recognizing phishing attacks and building their cyber security confidence.

Training

Training on different subjects is important to develop an understanding of cybersecurity threats. Topics such as password management, device security, and working remotely are all important to consider. We deliver our training in a precise and fun method by delivering quick 5-minute videos and a few quiz questions afterward. With over 200+ videos available, employees will receive training on various topics but never receive the same training twice!

Reporting

Reporting allows you to receive a detailed summary of all phishing and training on a monthly or weekly basis. Reporting can include a table for "Users to Watch." This is a succinct list of users that are not performing well with their training or phishing. Allowing you to provide more assistance to at-risk users.

Compliance

Businesses need to be aware of many requirements for cybersecurity insurance. You need consistent phishing, security training, and named topics in order to qualify for cyber insurance, all of which Phin satisfies. Phin's continuous training also satisfies the requirements for HIPAA, PCI, GDPR, *CIS Control 14*, *NIST 800-171*, and many more!
